

To Whom it may concern,

Re: CAN/ULC S705.2 Certification

Currently in Canada all chemical manufacturers must nominate a third-party to perform field quality assurance services and oversee the licensing process. The companies that currently offer this third-party service, and the manufacturers that each represent is as follows:

Urethane Foam Consultants (UFC) represent Covestro (formerly Bayer Material Science), Elastochem Specialty Chemicals, and Gaco Western.

Canadian Urethane Foam Contractors Association (CUFCA) represent Demilec and Genyk  
Morrison & Hershfield represent BASF, SWD Foam, Premium Spray Products, Johns Mansville and Icynene.

All of the third-party certification organizations listed above operate in accordance with the same requirements (CAN/ULC S705.2). As such, the installer must have the specific license (card) for the specific foam system they are applying. Under the current requirements, an installer who applies multiple spray foam systems is required to have a valid license for each one.

Feel free to contact the undersigned with any questions concerning the licensing and certification of spray foam installers in Canada.

Regards,

**Adam Luffman**, General Manager  
Urethane Foam Consultants  
PO Box 74  
Georgetown, Ontario
